Whether your class comes to the zoo or the zoo comes to you, our programs are sure to inspire student learning and add “life” to your curriculum! Zoo programs support Minnesota and Wisconsin State Science Standards (listed below) and include live animals and interactive activities. Costs listed below are in addition to zoo admission. There is no additional program fee for adults attending programs with a student group. Programs with the " symbol are also available as Zoomobile programs in your classroom (program length and fee will be different).

<tr>
<td><strong>Animal Adaptations</strong></td>
<td>From deserts to rainforests, students will discover what adaptations animals have that help them survive in some incredible habitats.</td>
<td>30-45 min.</td>
<td>Add $2.00 per student ($35 min.)</td>
</tr>
</tbody>
</table>

**Minnesota**
- 0.4.2.1.1. Observe a natural system or its model, and identify living and nonliving components in that system.
- 1.4.2.1.1. Recognize that animals need space, water, food, shelter and air.
- 1.4.2.1.2. Describe ways in which an animal’s habitat provides for its basic needs.
- 2.1.1.2.1. Raise questions about the natural world and seek answers by making careful observations, noting what happens when you interact with an object, and sharing the answers with others.

**Wisconsin**
- B.4.4 List the components of an ecosystem, including the qualities of a healthy habitat (EE)
- B.4.6 Cite examples of how different organisms adapt to their habitat (EE)
- C.4.1 Use the vocabulary of the unifying themes to ask questions about objects, organisms, and events being studied (S)
- C.4.2 Use the science content being learned to ask questions, plan investigations, make observations, make predictions, and offer explanations (S)
- F.4.1 Discover how each organism meets its basic needs for water, nutrients, protection, and energy in order to survive (S)
- F.4.2. Investigate how organisms, especially plants, respond to both internal cues and external cues (S)
- F.4.4 Using the science themes, develop explanations for the connections among living and nonliving things in various environments (S)

<tr>
<td><strong>Animal Life Cycles</strong></td>
<td>Who hatches from an egg? Who sheds their skin? Students will explore the stages animals go through after birth and how they develop skills and behavior to survive.</td>
<td>30-45 min.</td>
<td>Add $2.00 per student ($35 min.)</td>
</tr>
</tbody>
</table>

**Minnesota**
- 1.1.3.1.1. Observe that many living and nonliving things are made of parts and that if a part is missing or broken, they may not function properly.
- 1.4.3.1.2. Demonstrate an understanding that animals pass through life cycles that include a beginning, development into adults, reproduction and eventually death.
- 1.4.3.1.2. Recognize that animals pass through the same life cycle stages as their parents.
- 2.1.1.2.1. Raise questions about the natural world and seek answers by making careful observations, noting what happens when you interact with an object, and sharing the answers with others.
- 3.4.3.2.1. Give examples of likenesses between adults and offspring in plants and animals that can be inherited or acquired.
- 3.4.3.2.2. Give examples of differences among individuals that can sometimes give an individual an advantage in survival and reproduction.

**Wisconsin**
- C.4.1 Use the vocabulary of the unifying themes to ask questions about objects, organisms, and events being studied (S)
- C.4.2 Use the science content being learned to ask questions, plan investigations, make observations, make predictions, and offer explanations (S)
- F.4.3 Illustrate the different ways that organisms grow through life stages and survive to produce new members of their type (S)
- F.4.4 Using the science themes, develop explanations for the connections among living and nonliving things in various environments (S)

<tr>
<td>Creature Categories</td>
<td>Furry or scaly, feathered or slimy—we can see and feel many similarities and differences between animals. Discover how scientists sort animals into groups based on how they look and behave.</td>
<td>30-45 min.</td>
<td>Add $2.00 per student ($35 min.)</td>
</tr>
</tbody>
</table>

**Minnesota**
0.4.1.1.1. Observe and compare plants and animals.
0.4.1.1.2. Identify the external parts of a variety of plants and animals including humans.
0.4.1.1.3. Differentiate between living and nonliving things.
1.1.3.1.1. Observe that many living and nonliving things are made of parts and that if a part is missing or broken, they may not function properly.
1.4.1.1.1. Describe and sort animals into groups in many ways, according to their physical characteristics and behaviors.
2.1.1.2.1. Raise questions about the natural world and seek answers by making careful observations, noting what happens when you interact with an object, and sharing the answers with others.
3.4.1.1.1. Compare how the different structures of plants and animals serve various functions of growth, survival, and reproduction.
3.4.1.1.2. Identify common groups of plants and animals using observable physical characteristics, structures and behaviors.

**Wisconsin**
